

# Visual Verification Bridge

Powered by **CHeKT**.

## CKB-304v2 Wiring Guide

CKB-304v2  
Visual Verification Bridge

## Step 1 Power up the Bridge

**Note:** The Bridge draws 400mA peak. When powering the Bridge from the alarm panel, consider this when estimating your powered devices and back up battery.

In some cases\*, an additional power supply is recommended. If a separate power supply is used, the ground must remain common between the power supply, alarm panel & Bridge.

\*The NX-8v2 provides 1 Amp of AUX power

CKB-304v2  
Visual Verification Bridge

## Step 2

Run wire from AUX 1 to the Arming Input of the Bridge.

**Note:** This will allow you to arm/disarm the Bridge with the alarm panel. Any of the Aux 1-4 outputs can be programmed to the Bridge.

Visual Verification Bridge

### STEP 3

Run wire from the Bridge input to the zone terminal of the panel.

This wiring method requires the Bridge to share a common ground with the alarm panel. Otherwise, the Zone Ground must be wired to the Bridge Input Ground.

## ALARM PANEL PROGRAMMING:

### Aux1 To Arm/Disarm

In this scenario, program the following:  
(assuming no outputs previously used,  
substitute correct segment if not using output 1)

Location 45 Segment [1]

Turn on correct Partition

Location 46 Segment [1]

Ensure 6 is not on

Location [47]

Segment 1: 21

Segment 2: 0

**\*\*On NX8 v2 panels the 4 AUX  
outputs are on the screw terminal  
block.**

## CHeKT DEALER PORTAL:

### Bridge Programming

We recommend using “Loss Of Voltage  
Arming” when possible. This defaults to  
the bridge being in an armed state if the  
wiring for the Arming Pin gets compromised  
or disconnected for any reason.
